

Reminder to GDF operators and vapor recovery contractors

This message is to serve as a reminder to GDF operators and vapor recovery contractors that the allowance provided in CARB Advisory 405-B that operators may clear ISD alarms associated with system over pressurization due to winter gasoline blends expired as of March 1, 2012. As of March 1, operators must not clear any ISD alarms. Operators must call for service on ISD warning or failure alarms and a certified technician must perform appropriate troubleshooting and repair prior to clearing alarms. Please contact a SJVAPCD gasoline vapor recovery compliance staff member with questions. Bakersfield- (661) 392-5500 Fresno- (559) 230-6000 Modesto- (209) 557-6400
